# CURA STRONG

## Untempered Balcony Glass

CURA STRONG is a laminated glass product with a PVB foil that is significantly stronger than the PVB films that are commonly used in laminated safety glass. This stronger composition provides improved mechanical properties and new application possibilities. For example, the glass can be applied untoughened and it retains its shape when broken.

CURA Strong is particularly suited for balcony and balustrade applications where safety and aesthetics go hand in hand. The special PVB film that is applied has a neutral appearance that does not affect the colour of the glass.

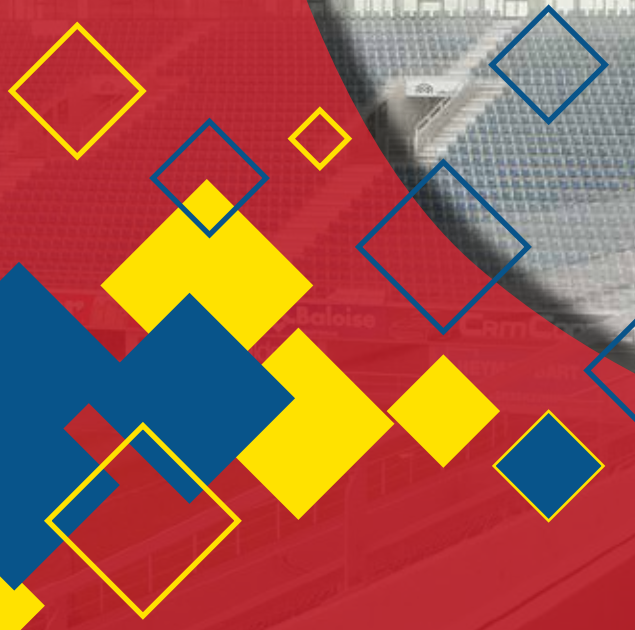

### Choose CURA STRONG!

- ◆ Untoughened application, resulting in lower cost and less cutting loss
- ◆ CURA STRONG in combination with the right profile ensures unprecedented high mechanical resistance
- ◆ Aesthetically finer solutions due to one-sided glass clamps and thinner compositions
- ◆ When broken, it's safer than laminated glass with ordinary PVBs
- ◆ Less susceptible to moisture and less risk of delamination
- ◆ Unlimited possibilities in laminated combinations with many types of glass

### Technical specifications

- ◆ Available in stock sheets and cut to size and polished
- ◆ Maximum dimensions 2550 x 3210 mm
- ◆ One-sided clamping possible starting from 20.8 thickness
